Selecting the right mobility aids to meet your needs is an important decision. Many people use assistive devices to increase or maintain independence. Wheelchairs, rollators, walkers, crutches and walking sticks empower you to go further and fully experience the world around you — on your terms.

For over half a century, Days® has been a recognised global leader in empowering personal mobility. Fully understanding and embracing an individual's mobility needs, Days enhances and advances lives at every turn. When it comes to safety, ease of use, affordable quality, customer support and breadth of product choices, the world turns to Days.

When you select a Days mobility aid, you can expect to experience the difference. Days represents:

Boundlessness

We share our passion for removing life's boundaries, offering clinicians and individuals a broad range of mobility solutions. With a global reach, Days is always nearby.

Moving

Days is trust that moves you. We strive to inspire excitement about the possibilities of everything life has to offer. We believe your physical needs should not be a limitation, and we are here to help you propel your life — wherever you wish to go.

Knowledgeable

Days products and services support you by being built on a solid foundation of quality materials and heritage. With a firm understanding of the mobility industry, we are made to exceed expectations. You can rest assured with Days.

Compassionate

With every design, Days considers the unique needs and demands of the user. Days knows the products it creates will move both the body and spirit of an individual.

Go further with Days

Founded in 1968 in Bridgend, Wales, Days has led the industry in mobility for over 50 years. With a broad range of wheelchairs, rollators, walkers, crutches and walking sticks, Days is the brand to which the world turns to advance their lives. Our products are easy to use and ready when you need them while offering affordable quality. With a steadfast focus on safety, Days offers products that customers trust for their mobility needs.

The Days foundation rests on four central pillars: dedication, empowerment, understanding and enabling freedom.

Dedication

With a steadfast focus on product safety and ease of use, customers and clinicians can trust — and rest assured — knowing our products will take care of their mobility needs. With over a half-century of expertise, Days has a time-honoured reputation that continues to propel customers and their lives forward each day.

Empowerment

Days goes the distance with a quality, broad range of mobility aids that fit each unique individual for life's ever-changing path. Days helps empower clinicians, distributors and individuals to find the ideal solution for daily freedom of movement and motion.

Understanding

Days has developed an array of mobility support with every diverse need in mind. With extensive knowledge of the mobility industry, Days applies its empathy and understanding to produce quality, affordable products that support motion.

Enabling freedom

Navigating through life's twists and turns, Days helps keep the momentum going with a determination to uplift, support and answer each user's needs.

Wheelchairs

You're in the driver's seat

The World Health Organization recognizes that wheelchairs are essential for mobility, dignity and general wellbeing¹. Whether self- or attendant-propelled, your high-quality chair should enhance your mobility and safety while being easy to use and affordable. With Days, you will also have access to customer support when you need it most.

All Days Wheelchairs include the following features:

- Puncture-proof tyres to help ensure trouble-free mobility, low maintenance and a smooth ride over most surfaces
- Moulded armrests for extra comfort
- Folding for easy storage and transportation
- Wipe-clean padded seat fabric

Rollators

Your guide to choosing the perfect rollator

Choosing a rollator with a frame at the correct height is essential to ensure wellbeing. Other factors to consider include where you will primarily use your rollator, the amount of support you will need, the number of wheels (three or four), portability and storage.

When taking measurements, consider the following:

- If the frame is too high, you may find it difficult to straighten your elbows and increase weight distribution through your arms.
- Your frame is too low if you are bent over with poor posture.
- Generally, the height of the handgrips should be at the level of the wrist bone when your elbows are slightly bent, at an angle of about **15° flexion**.
- When measuring the height of your walking frame, wear appropriate and supportive footwear.
- If your rollator includes a seat, consider the seat height. When seated comfortably, your feet should be flat on the ground.

Days 102 & 105 Rollator

Keeping you on the move

The 102 and 105 are our most popular rollators. With aluminium frames, combining lightweight design and robust engineering quality. Days 102 is compact with 6" wheels and Days 105 is standard with 8" wheels.

Key features

- Available in two sizes to accommodate a range of heights and builds
- Lockable loop brakes for security and convenience
- Adjustable brake tension to suit your needs
- Folds easily for storage and transport
- Ergonomic handgrips and adjustable height handles with five settings at 2.5-cm intervals

Crutches

All Days Crutches are made from lightweight aluminium with a tough anodised finish, making them incredibly durable and easy to use. They are designed for minimum maintenance and only require an occasional wipe-down with a soft cloth. Disinfectant solution can be used if needed.

Crutches

How to select crutches

Factors include handle options, adjustment levels and standard features

Handle options

Standard

Standard plastic handgrips are easily wiped clean to reduce the risk of cross-contamination.

Ergonomic

Ergonomic handles were designed and developed with physiotherapists and healthcare professionals. The unique handle distributes pressure over a greater area of the user's hand, improving comfort and safety.

Comfy grip

Comfy grip handles are made from soft-touch plastic to provide a more comfortable and cushioned grip — ideal for long-term use.

Adjustment levels

Single adjustable crutches

Single adjustable crutches enable you to adjust the handle height, but the distance between the handle and arm cuff is fixed.

Double adjustable crutches

Double adjustable crutches enable you to adjust the handle height and the distance between the handle and arm cuff.

Permanent crutches

Permanent crutches are not adjustable and must be cut to size to suit each user. They are ideal for long-term use.

Standard features

Closed fixed armband

The closed fixed armband enables you to retain the crutch on your arm even if you release your grip on the handle. This prevents the crutch from dropping to the floor accidentally.

Non-marking ferrules

Non-marking ferrules are slip-resistant for added safety. The 22-mm ferrules are fitted for adult crutches, while 16-mm ferrules are fitted for children's crutches.

Push-pin adjustable

Adjustment is easy using the simple push-pin operation.

Walking Sticks

Select the walking stick that is right for you

Days Walking Sticks are available in various styles. Use the guide on the following page to help you select the right walking stick for you.

How to select walking sticks

Factors include stick height, left- or right-handed and type

Walking stick height

Using a walking stick at the correct height is essential. When measuring, the handle should rest on the floor while your arm is relaxed. Then, adjust or trim the stick to the **crease of the wrist**.

When using your walking stick, you should maintain an upright posture with the elbow slightly bent. Your body weight will be supported when you push down on the stick while walking.

If you need two walking sticks, the length should be slightly longer as they will be used ahead of the body when you are walking.

Left or right hand

You should hold the stick in hand on the **opposite side to the one that needs support** if you are using a walking stick to compensate for an injury to your leg or joint on one side. If you use the stick for balance, you can use it with either hand.

Types of walking sticks

Adjustable

Adjustable walking sticks can be modified to different heights using simple spring-loaded catches and telescopic shafts.

Tripod and tetrapod

Tripod and tetrapod walking sticks have a broad footprint to provide additional stability. These are best suited for heavier users who require a more stable base.

Folding walking sticks

Folding walking sticks are lightweight metal sticks with sectioned shafts that enable you to fold them for storage. For example, you may transport them within a handbag. Strong elastic runs inside the shaft to ensure that the stick remains stable in its open position.
